

The Orbital Energy Services Coupling Boring Machine is designed to quickly bore virtually all coupling bolt holes regardless of the application. The unit fits into confined spaces and allows measuring and inspection without the need to reset.

The Orbital Energy Services Coupling Boring Machine is designed to set up fast and bore to very accurate tolerances of +/- 0.001 inch while maintaining constant bore size for all the holes on the coupling. After boring, minimal honing is required. Capabilities also include spot facing to correct out-of-plane faces to very tight tolerance.

Machine Specifications

BAR DIAMETER:	2.5"
BORING DIAMETERS:	2" - 4.2"
MAX BORE LENGTH:	34"
LENGTH OF BAR:	36"

Orbital Energy Services stands ready to machine and manufacture all of your coupling hardware to the new bore size; coupling bolts, nuts, and washers are reengineered to your specification.
